

WE CARRY YOUR WEIGHT

-RTT™

TURNTIME
TECHNOLOGIES

RTT™ UNITS

World-Class Loading Arms

LongReach - GSE

Easily bolts onto both ends of any belt loader.

Speedloader - Terminal

Integrates into new or existing systems or runs standalone.

RTT™ BENEFITS

- ▶ Reliable in Any Condition
- ▶ ROI Typically <12 Months
- ▶ 70% Less Physical Strain
- ▶ 30% Faster Throughput
- ▶ Controlled by loader

BENEFITS

Reliable since
1986

Improved Ergonomics

70% reduced physical strain for workers.
With the RTT you achieve:

- No twisting.
- No lifting.
- Only push & pull.

Suitable for Widebody

Compartment 5 in widebody aircraft is hard and dangerous to load. Not with RTT.

- No reaching for cargo or bags on the belt loader. Eliminating fall risk.
- Safe extension into the aircraft.

Short Learning Curve

The RTT is intuitive and completely controlled by the loader.

- Simply grab the handle and move in the desired direction.
- No need for lengthy, complicated, or expensive training.

Increased Revenue

Being faster and safer allows you to load cargo there's usually no time for. For example:

- Postal cargo.
- Packages needing urgent transport.

Park at Safe Distance

Bumping aircraft with belt loaders or other systems quickly becomes expensive.

- With RTT you can park at a safe distance and let it bridge the gap.
- No damage due to aircraft movement during loading/unloading, as the RTT does not touch the cargo door or floor like other systems.

Quick ROI: 12-18 Months

Fitting virtually any belt loader, the RTT provides rapid ROI—no need to buy a new, expensive belt loader.

- Simply mount it onto your current belt loader.
